
Protective barrier for pallet rack | RACK BARRIER

Reference : 18562

Description :

The protective barrier for pallet rack is the ideal and economical solution to protect the shelving extremities, the vulnerable machines from possible trolley impacts. Polymer barrier equipped with a protection system with reinforced profile, doubly flexible and absorbent. The protection flexes and absorbs the impact of heavy loads then returns to its original appearance. No replacement or repair is therefore necessary after a collision. - Colours: yellow

- Size: H 450 mm
- Fixing by anchors for fixing to the concrete floor

Benefits :

- Ideal for the protection of pedestrian areas, shelving extremities, machinery and conveyors.
- Quick installation and assembly.
- Protection system with reinforced profile, doubly flexible and absorbent.
